

Reg T cells

A OLR1+ TAM Communication Network

GSE144735 Border | LIANA rank_aggregate | $p < 0.05$

Myofibroblasts

Signal type

Immune suppression

OLR1+ TAMs → CD8+ T cells
n=168 | LGALS1, SPP1, HMGB1

T helper modulation

OLR1+ TAMs → CD4+ T cells
n=167 | LGALS1, SPP1

Treg recruitment

OLR1+ TAMs → Reg T cells
n=192 | SPP1, MIF

ECM remodeling (out)

OLR1+ TAMs → Myofibroblasts
n=379 | SPP1->ITGAV:ITGB1

CAF feedback (in)

Myofibroblasts → OLR1+ TAMs
n=471 | TIMP1->CD63, COL1A1->CD44

Key finding

OLR1+ TAMs act as the dominant immunosuppressive hub, targeting CD8+ T cells via LGALS1/SPP1/HMGB1 while forming a positive feedback loop with FAP+ CAFs

Arrow width = communication strength | n = LR pairs
